CORNER WITNESS DETAIL

SCALE 1" = 20'

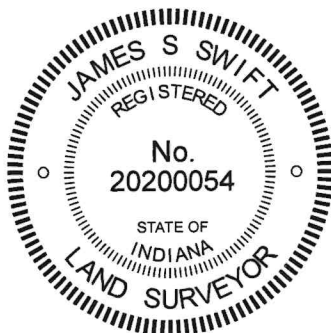

A - S.W. edge 28" dia. Oak, flush, 40.5'
B - W. edge 14" dia. Maple, 1' a.g., 14.8'
C - N. edge 20" dia. Walnut, 1' a.g., 10.9'

The rebar with Vermillion County cap was set in place of a rebar found. This found rebar is shown as being set on a survey by J. Reese Harpel, LS No. 20000203, on a survey recorded as Instrument 2017000252. The found rebar is on the edge of a shallow gulley. Fencing in the immediate vicinity of the corner is impacted by the presence of the gulley, though the rebar was in-line with existing fencing further east, west, and south. The position of the rebar fits well with evidence of proximate corners and fits well with original federal dimensions for the fractional east half of the section, as reported at the north and south lines of Section 28. This is an irregular section wherein the eastern portion is fractional as surveyed from the west, terminating on the range line between Ranges 9 and 10 West. No other evidence of the corner was found. The position established by Harpel was held as the best available evidence of the corner. The existing 24-inch rebar was replaced with a 30-inch length of rebar with metal cap stamped 'Vermillion County Surveyor' on November 7, 2025.
